Application Enhancements & Maintenance

AmbaSoft won a contract with Yamaha Motor Corporation of Cypress, CA to maintain their custom-built CMS system (YCMS). We quickly discovered that the software was un stable and outdated. Based on user input, our team designed significant enhancements, including a System upgrade which greatly increased productivity and efficiency.

The outcome was streamlined application, upgraded from SQL 7 to SQL 2000. Based on the success of YCMS, Yamaha expanded out projects to include an upgrade to their sales parts re-order system (AALS). We again successfully upgraded the application, allowing a more robust system.

Yamaha Motors is an excellent example of AmbaSoft's flexibility, whether we are involved in the initial phases of software development, or enhancing an application. We can assume responsibility at any phase of software's lifecycle. We look forward to discussing your software needs.
